### What Is the Jett Plasma Pen?

The Jett Plasma Pen is a painless, in-office treatment that helps relieve dry eye caused by blocked oil glands along your eyelids. For dry eye care, we use a silver, non-ablative tip that works through a gentle microcurrent — not heat, and not the skin-removing “plasma” procedure the name might suggest.

A smooth conductive gel is applied to your eyelids, and the silver tip delivers a controlled microcurrent into the tissue around your meibomian glands. This gentle energy helps soften thickened oil and prompts the glands to release it, much like a focused massage from within the lid.

The same microcurrent also helps calm inflammation, improve blood flow to the lid tissue, and support healthier tear production — all with zero downtime.

### What Does the Jett Plasma Pen Treat?

The conditions this treatment helps with all trace back to your meibomian glands — the tiny oil glands along your eyelids that keep tears from drying out too fast. When these glands become blocked or stop working well, your tear film breaks down and a frustrating cycle of dryness and irritation begins.

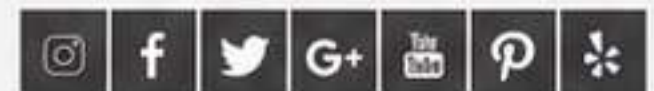

The Jett Plasma Pen can support care for dry eye from meibomian gland dysfunction (MGD), blepharitis (inflamed eyelid margins), and chalazia (lid bumps from fully blocked glands). It works at the source — clearing blockages and calming inflammation — rather than only easing symptoms for a few hours.

Because it addresses the root cause, it can be a helpful option when warm compresses, lid hygiene, and drops haven't been enough.

## What to Expect From the Jett Plasma Pen

### Starting With a Consultation

Every treatment starts with a consultation and evaluation so we can pinpoint the underlying cause of your dry eye. From there, we build a fully customized treatment plan tailored to your eyes. Your plan may pair the Jett Plasma Pen with IPL, RF, LipiFlow, blepharitis treatment, or various at-home and in-office options.

### After Your Treatment

A typical visit takes about 30 to 45 minutes and is comfortable, with the intensity adjustable for sensitive eyes. Most patients return to normal activities the same day. You may notice mild redness for a few hours, and many notice nothing at all — there's no crusting, scabbing, or downtime to plan around.

### Who Can Benefit?

You might benefit from Jett Plasma Pen therapy if you experience:

- Dry eye from meibomian gland dysfunction (MGD)
- Recurring chalazia (lid bumps)
- Blepharitis or irritated eyelid margins
- Gritty, scratchy, or burning eyes
- Watery eyes that still feel dry
- Contact lens discomfort that worsens through the day
